

Maintaining and Optimizing your iSeries/AS400 investments.

Introduction

Some regard the term “Legacy” as a negative connotation, however we see it as a term describing a product that endures.

Introduced over 25 years ago the iSeries/AS400 workhorse platform has proven to be reliable, secure, and has been called ‘a system that is future proofed’ and will most likely be here for a long time to come.

Vitally important to getting the most out of these systems and leveraging your investments is running your applications in a tuned and stable environment. Architecture, hardware and server configurations are just a few of the factors that can have a significant impact on the performance and stability of your applications.

Why ABMartin?

ABMartin's technology experts recognize the challenges that organizations face in maintaining their systems to maximize optimization & performance. By closely assessing and accurately diagnosing system issues, ABMartin helps better maintain your iSeries/AS400 environments ensuring that your applications and solutions are able to perform at the highest levels.

Our Health Check typically entails three to five day onsite discovery and data gathering which helps us understand the technical usage patterns of the system followed by a week of assessment and analysis (typically remote). As a result, we deliver a ‘Findings and Recommendations’ report detailing issues discovered, proposed resolution, and recommendations for process methodology and system improvements.

About Health Checks

Our 6 point system ensures you leverage and maximize your investments saving you time, reducing running costs, and increasing performance.

- ◇ Performance Analysis
- ◇ Configuration Validation
- ◇ Memory and Disk utilization
- ◇ SQL Optimization Review
- ◇ System Limits and Thresholds
- ◇ Database Stability and Performance

- ⇒ Reclaim disk space
- ⇒ Increase application performance
- ⇒ Reduce risk
- ⇒ Increase productivity
